

Leak Detection and Repair (LDAR) Services

Montrose's Air Quality Services (MAQS) division is committed to collaboration. With 370 consultants, project managers, technicians and engineers in more than 30 offices nationwide, we provide personalized service with regional expertise. We also draw on a nationwide history of successful programs throughout the regulatory, energy, research and industrial communities. Clients get details on requirements and results, and thorough, accurate data. Because we advise the EPA on reporting protocols, Montrose experts have all the answers. No matter the size or complexity, Montrose has the right professionals for any program. With our high quality and strict adherence to regulatory compliance, Montrose delivers the highest technical and ethical standards without interruption to business goals.

The Leak Detection and Repair (LDAR) division of MAQS includes engineers, scientists, analysts and technicians, all with extensive experience in a wide range of leak detection monitoring applications. We have been conducting custom LDAR inspections for over 25 years, in more than 1,000 facilities. We have invested in state of the art technology and developed a custom LDAR reporting software accessible from any Internet connection. Certified LDAR Professionals perform periodic leak inspection of piping components and process units pursuant to Regional and EPA requirements, including SOCOMI, HON, NESHAPS, MACT, and NSPS standards, utilizing equipment and procedures conforming to EPA Reference Method 21. Our LDAR staff is dedicated to creating individualized solutions for your specific monitoring needs.

- Onshore Oil & Gas Production
- Gas Plants
- Refineries
- Liquid Terminals
- Ethanol Production
- Chemical Plants
- Pharmaceutical Plants
- Geothermal Facilities
- DOT Pipelines
