

Toxics Release Inventory (TRI)

Toxics Release Inventory (TRI) tracks the management of certain toxic chemicals that may pose a threat to human health and the environment. U.S. facilities in different industry sectors must report annually how much of each chemical is released to the environment and/or managed through recycling, energy recovery and treatment.

United States Environmental Protection Agency

Montrose Air Quality Services has extensive experience preparing TRI reports for the cement industry. In addition, Montrose can provide TRI assistance by auditing current and past TRI reporting for accuracy. A sample cement plant TRI diagram is presented below with the areas required for TRI reporting highlighted.

Please contact Karl Lany at 714.282.824 for any TRI assistance needs or questions.
